

Tiered honorification in E. Indo-Aryan: A [HON]-less proposal¹

Ruoan (Margaret) Wang
rmwang@mit.edu

SALT34
May 28 2024

¹Many thanks to Omri Doron, Adam Albright, Yash Sinha, Norvin Richards, Kai von Fintel, Viola Schmitt, and the lovely FASAL14 audience for their guidance.

Introduction

Eastern Indo-Aryan has tiers of honorificity, traditionally analyzed via [HON].

3H	<i>u</i>	<i>u səb</i>	<i>-əith</i>

e.g. Alok 2020: syntactic features for 3-tier systems.

- NH: [-high, -hon]
- H: [-high, +hon]
- HH: [+high, +hon]

Today: Following typological generalizations advanced by Wang (2023), we explore an [HON]-less analysis for tiered politeness systems.

Roadmap

Theoretical backdrop: a [HON]-less approach to honorifics

- 1 Taboos: grammatical reflexes of negative politeness
- 2 Taboo-compliant recruits: plural, 3rd person, non-referrers
- 3 Deriving honorification systems: Taboos » MP!

Roadmap

Theoretical backdrop: a [HON]-less approach to honorifics

- 1 Taboos: grammatical reflexes of negative politeness
- 2 Taboo-compliant recruits: plural, 3rd person, non-referrers
- 3 Deriving honorification systems: Taboos » MP!

Application to tiered systems

- 4 *Ditto* with repluralization as a caveat

What does a polite person do?

Avoidance forms the core of polite behaviors:

- indirect eye contact,
- distancing oneself,
- hedging,
- circumlocution,
- being vague/imprecise, ...

Formalized as **negative politeness** (Brown & Levinson 1987: 61): respecting “the basic claim to territories, personal preserves, rights to non-distraction— i.e. to freedom of action and freedom from imposition”.

What does a polite grammar want?

People **avoid** for politeness reasons. Within the confines of a grammar that does not encode [HON], this social need is manifested as **avoiding reference**.

What does a grammar use to calculate the avoidance of reference? For pronouns:

What does a polite grammar want?

People **avoid** for politeness reasons. Within the confines of a grammar that does not encode [HON], this social need is manifested as **avoiding reference**.

What does a grammar use to calculate the avoidance of reference? For pronouns:

- ④ who they point to in the discourse
person presuppositions, motivated by semantic markedness (Sauerland 2008);

What does a polite grammar want?

People **avoid** for politeness reasons. Within the confines of a grammar that does not encode [HON], this social need is manifested as **avoiding reference**.

What does a grammar use to calculate the avoidance of reference? For pronouns:

- 1 who they point to in the discourse
person presuppositions, motivated by semantic markedness (Sauerland 2008);
- 2 whether they point to a unique entity
(non-)atomicity, independently needed for capturing distinctions such as mass-count, collective-distributive, expressions like *together*, *each*).

How does a polite grammar avoid? Person

Assumed ontology of persons:

i : Spkr

u : Hr

o : not Spkr or Hr

o' : not Spkr or Hr or o

We assume a pragmatic maxim about presuppositions on individuals (1), and give its preferences in (2). (« denotes “less preferred than”)

(1) **Taboo on Person (ToP):**

In respect contexts, use the form that carries as few person presuppositions as possible.

(2) $\{i\}, \{u\} \ll \{o\} \ll \{o'\}$

1st, 2nd \ll 3rd \ll non-referring

“non-referring”: impersonals, indefinites, anaphors

How does a polite grammar avoid? Atomicity

Avoiding **unique** reference is also good enough.

Assumed ontology of plural persons:

Plural pronouns are formed by adding ‘others’, o' ; this also captures their associative interpretations.

A plural set “anonymizes” the singular respected referent.

We assume a pragmatic maxim preferring non-atomic reference (3). (4) are its preferences.

(3) **Taboo of Atomicity (ToA):**

In respect contexts, use a form that refers to non-atomic entities.

- (4) a. $\{u\} \ll \{u + o' + o'' + \dots\}$
2nd \ll 2nd plural
- b. $\{o\} \ll \{o + o' + o'' + \dots\}$
3rd \ll 3rd plural

Why not just one Taboo?

In respect contexts, use the form that carries as few presuppositions as possible.

However, targeting *any* presuppositional cline overgenerates:

- 2PL pronouns can be **associative** (e.g. Daniels 2000; Moravcsik 2003). If associativity is handled via presupposition (e.g. Dayal 2014), making 2PL forms *not* presuppositionally poor.
 - (5) Addressing a plurality:
 - a. I need silence from you. (successful iff all addressees are silent)
 - b. I need you to buy me a sofa. (successful if 1 sofa was bought)
- **Gender**. In languages with a MASC-FEM distinction, the former is presupposition-poor (Bobaljik & Zocca 2011, Sauerland 2008) (6). But, MASC is never recruited for respected females (Wang's puzzle in §6.1).
 - (6)
 - a. Froggy is a waiter, and Anne is <a waiter> too.
 - b. #Anne is a waitress, and Froggy is <a waitress> too.

Recruits and their presuppositions

Only some forms will satisfy the Taboos and be a good *recruit*.

Recruits and their presuppositions

Only some forms will satisfy the Taboos and be a good *recruit*.

- (7)
- a. $\llbracket 1 \rrbracket = \lambda x_e : x$ is the speaker & x is discourse-salient . x
 - b. $\llbracket 2 \rrbracket = \lambda x_e : x$ is the hearer & x is discourse-salient . x
 - c. $\llbracket 3 \rrbracket = \lambda x_e : x$ is discourse-salient . x
 - d. $\llbracket 4 \rrbracket = \lambda x_e . x$

(7c,d) are good recruits for honorification: they are less/not burdened with person presuppositions, making ToP happy.

Recruits and their presuppositions

Only some forms will satisfy the Taboos and be a good *recruit*.

- (7) a. $\llbracket 1 \rrbracket = \lambda x_e : x$ is the speaker & x is discourse-salient . x
- b. $\llbracket 2 \rrbracket = \lambda x_e : x$ is the hearer & x is discourse-salient . x
- c. $\llbracket 3 \rrbracket = \lambda x_e : x$ is discourse-salient . x
- d. $\llbracket 4 \rrbracket = \lambda x_e . x$

(7c,d) are good recruits for honorification: they are less/not burdened with person presuppositions, making ToP happy.

- (8) $\llbracket \text{ASSOC} \rrbracket = \lambda x_e \lambda X_{\langle e,t \rangle} : \forall z [z \leq X \rightarrow z \sim_c x] \ \& \ x \leq X . \oplus X$
- (9) $\llbracket \text{2-ASSOC} \rrbracket = \lambda X_{\langle e,t \rangle} : \forall z [z \leq X \rightarrow z \sim_c \text{hearer}] \ \& \ \text{hearer} \leq X . \oplus X$
- (10) $\llbracket \text{3-ASSOC} \rrbracket = \lambda X_{\langle e,t \rangle} : \forall z [z \leq X \rightarrow z \sim_c \text{disc-salient entity}] . \oplus X$

(9), (10) are good recruits for honorification: since they carry associativity presuppositions, they refer to non-atomicities, making ToA happy.

A polite grammar avoids

Don't refer! / *ToP*: honorific recruitments of 3rd; impersonal

A polite grammar avoids

Don't refer! / *ToP*: honorific recruitments of 3rd; impersonal

Don't refer uniquely! / *ToA*: honorific recruitment of plural

A polite grammar avoids (unique) reference

The predicted pools of feature values available for honorific recruitment:

$$(11) \quad \{u\} \ll \{o\} \ll \{o'\}$$

2nd « 3rd « non-referring

$$(12) \quad \{u\} \ll \{u + o' + o'' + \dots\}$$

2nd « 2nd plural

$$(13) \quad \{o\} \ll \{o + o' + o'' + \dots\}$$

3rd « 3rd plural

Evidently, a polite grammar avoids (unique) reference

Happily, these predictions are borne out, with robust typological asymmetries.

- (14) $\{u\} \ll \{o\} \ll \{o'\}$
2nd \ll 3rd \ll non-referring
Italian 3SG *Lei* for 2SG.H
W. Apache impersonal *ko-* for 3SG.H
**2 for 3.H*
- (15) $\{u\} \ll \{u + o' + o'' + \dots\}$
2nd \ll 2nd plural
French 2PL *vous* for 2SG.H
Wolaytta 2PL *ʔinté* for 2SG.H
- (16) $\{o\} \ll \{o + o' + o'' + \dots\}$
3rd \ll 3rd plural
Malayalam 3PL *avar* for 3SG.H
**SG for PL.H*

Evidently, a polite grammar avoids (unique) reference

Happily, these predictions are borne out, with robust typological asymmetries.

- (14) $\{u\} \ll \{o\} \ll \{o'\}$ Italian 3SG *Lei* for 2SG.H
2nd \ll 3rd \ll non-referring W. Apache impersonal *ko-* for 3SG.H
*2 for 3.H
- (15) $\{u\} \ll \{u + o' + o'' + \dots\}$ French 2PL *vous* for 2SG.H
2nd \ll 2nd plural Wolaytta 2PL *ʔinté* for 2SG.H
- (16) $\{o\} \ll \{o + o' + o'' + \dots\}$ Malayalam 3PL *avar* for 3SG.H
3rd \ll 3rd plural *SG for PL.H

Despite Indo-Aryan's tiered system, it is not a counterexample. I'll show that all Indo-Aryan honorifics swim only in these pools.

Predictions on multiple recruitment

Putting everything onto a single cline:

Predictions on multiple recruitment

Putting everything onto a single cline:

We predict that:

- some resources are more honorific (=less referentially constrained) than others;
- the pool for addressee honorifics is larger than the pool for referent honorifics.

Predictions borne out: E. Indo-Aryan (Chatterji 1926)

Bangla: singular pronouns and person agreement (David 2015)

Magahi: singular pronouns and person agreement (Alok 2020)

Predictions borne out: E. Indo-Aryan (Chatterji 1926)

Bhojpuri: singular pronouns and person agreement (Lohar 2020)

2MH.SG *raua* from 3rd person nominal 'royal';

3NH *u* from Sanskrit 3SG pronoun

Predictions borne out: E. Indo-Aryan (Chatterji 1926)

Bhojpuri: singular pronouns and person agreement (Lohar 2020)

2MH.SG *raua* from 3rd person nominal 'royal';

3NH *u* from Sanskrit 3SG pronoun

Relative ranking of tiers tracks referentiality: The higher the tier, the less referential to *u* it was.

... *Was?* Synchronic suspicions

Number/person were recruited for the honorific pronouns and agreement, to the extent that there are now only “honorific” distinctions.

Aren't these synchronic “honorific” distinctions evincing [HON]?

... *Was?* Synchronic suspicions

Number/person were recruited for the honorific pronouns and agreement, to the extent that there are now only “honorific” distinctions.

Aren't these synchronic “honorific” distinctions evincing [HON]?

Two claims I push for a completely [HON]-less view:

- Ranking of pragmatic maxims;
- What repluralization can do.

Pragmatic maxims

Inventory of maxims:

- (17) **Maximize Presupposition!** (Heim 2011)
Choose the strongest presupposition compatible with what is assumed in the conversation.
- (18) **Taboo on Person (ToP):**
In respect contexts, use the form that carries as few person presuppositions as possible.
- (19) **Taboo of Atomicity (ToA):**
In respect contexts, use a form that refers to non-atomic entities.

In normal contexts, MP! is not flouted: MP! » ToP/ToA.

Singular address is only possible with a 2SG form.

In respect contexts, MP! is flouted in favor of the Taboos:

ToA » MP!, or ToP » MP! Mismatches become possible.

Back to Bangla: Repluralization

All plural pronouns share *-ra...*

	SG	PL
2NH	<i>tui</i>	<i>to-ra</i>
2H	<i>tumi</i>	<i>tom-ra</i>
2HH	<i>apni</i>	<i>apna-ra</i>
3NH	<i>śe</i>	<i>ta-ra</i>
3H	<i>tini</i>	<i>tã-ra</i>

Back to Bangla: Repluralization

All plural pronouns share *-ra...*

	SG	PL
2NH	<i>tui</i>	<i>to-ra</i>
2H	<i>tumi</i>	<i>tom-ra</i>
2HH	<i>apni</i>	<i>apna-ra</i>
3NH	<i>śe</i>	<i>ta-ra</i>
3H	<i>tini</i>	<i>tã-ra</i>

the associative morpheme (Haldar, p.c.)

- (20) Ram- $\{gulo/ra\}$
Ram- $\{PL/ASSOC\}$
'The Rams / Ram and co.'
- (21) ama-r boi- $\{gulo/*ra\}$
1SG-GEN book- $\{PL/ASSOC\}$
'my books'

Back to Bangla: Repluralization

All plural pronouns share *-ra*...

	SG	PL
2NH	<i>tui</i>	<i>to-ra</i>
2H	<i>tumi</i>	<i>tom-ra</i>
2HH	<i>apni</i>	<i>apna-ra</i>
3NH	<i>śe</i>	<i>ta-ra</i>
3H	<i>tini</i>	<i>tã-ra</i>

the associative morpheme (Halдар, p.c.)

(20) Ram- $\{\text{gulo/ra}\}$
Ram- $\{\text{PL/ASSOC}\}$
'The Rams / Ram and co.'

(21) ama-r boi- $\{\text{gulo/*ra}\}$
1SG-GEN book- $\{\text{PL/ASSOC}\}$
'my books'

Plural pronouns are **associative**: for a mixed-tier group, the tier associates to the most salient addressee. They are **not additive**: they do not require all members of the plural group to be of the same social tier.

Repluralization: after the plural was recruited for singular honorification, new plurals were innovated by suffixing *-ra*.

Repluralization and the pragmatic calculus

De-pluralization, or [HON]-ification, never happened. e.g. the stem used for the second person H tier, *tum-*, **was and is** plural.

Bangla has two 2PL forms: *tumi*; *tomra*.

- *tum-* is plural; *-ra* is transparently the associative morpheme.
- *tomra* is “doubly” plural.

Repluralization and the pragmatic calculus

De-pluralization, or [HON]-ification, never happened. e.g. the stem used for the second person H tier, *tum-*, **was and is** plural.

Bangla has two 2PL forms: *tumi*; *tomra*.

- *tum-* is plural; *-ra* is transparently the associative morpheme.
- *tomra* is “doubly” plural.

In respect contexts language-wide, the relevant ranking is **ToA » MP!**:

- ① addressing a singular is only possible with a 2PL form;
- ② addressing a plural is only possible with a 2PL form.

But which 2PL form for which case?

④ Addressing a singular is only possible with a 2PL form

What is assumed: atomic address in respect context.

Taboo on Atomicity » Maximize Presupposition!.

④ Addressing a singular is only possible with a 2PL form

What is assumed: atomic address in respect context.

Taboo on Atomicity » Maximize Presupposition!.

<i>tabula rasa</i>	π	π -ASSOC
2SG	<i>tui</i>	<i>to-ra</i>
2PL	<i>tumi</i>	<i>tom-ra</i>
ANAPH	<i>apni</i>	<i>apna-ra</i>
3SG	<i>śe</i>	<i>ta-ra</i>
3PL	<i>tini</i>	<i>tã-ra</i>

<i>ToA applies</i>	π	π -ASSOC
2PL	<i>tumi</i>	<i>tom-ra</i>
3PL	<i>tini</i>	<i>tã-ra</i>

<i>MP! applies</i>	π	π -ASSOC
2PL	<i>tumi</i>	<i>tom-ra</i>
2PL	<i>tumi</i>	

Even though MP! is outranked, it still has effects on the pragmatic calculus.

- ToA eliminates forms which refer to atomic entities;

④ Addressing a singular is only possible with a 2PL form

What is assumed: atomic address in respect context.

Taboo on Atomicity » Maximize Presupposition!.

<i>tabula rasa</i>	π	π -ASSOC
2SG	<i>tui</i>	<i>to-ra</i>
2PL	<i>tumi</i>	<i>tom-ra</i>
ANAPH	<i>apni</i>	<i>apna-ra</i>
3SG	<i>śe</i>	<i>ta-ra</i>
3PL	<i>tini</i>	<i>tã-ra</i>
<i>ToA applies</i>	π	π -ASSOC
2PL	<i>tumi</i>	<i>tom-ra</i>
3PL	<i>tini</i>	<i>tã-ra</i>
<i>MP! applies</i>	π	π -ASSOC
2PL	<i>tumi</i>	<i>tom-ra</i>
2PL	<i>tumi</i>	

Even though MP! is outranked, it still has effects on the pragmatic calculus.

- ToA eliminates forms which refer to atomic entities;
- MP! eliminates forms which refer to 3rd persons;

④ Addressing a singular is only possible with a 2PL form

What is assumed: atomic address in respect context.

Taboo on Atomicity » Maximize Presupposition!.

<i>tabula rasa</i>	π	π -ASSOC
2SG	<i>tui</i>	<i>tō-ra</i>
2PL	<i>tumi</i>	<i>tom-ra</i>
ANAPH	<i>apni</i>	<i>apna-ra</i>

- MP! chooses between *apni/apnara* depending on the assumed atomicity of the addressee.

In the NH tiers, **MP!** is highest-ranked. No mismatches are allowed.

Bangla summary

Repluralization produced more recruits for the pragmatic calculus.

- Former plurals (*e.g. tum-*) are non-atomic and hence honorific according to ToA » MP!;
- Innovated plurals X-ra (*e.g. tom-ra*) are also non-atomic.
- Where -ra combined with a former plural, resulting forms are **twice-non-atomic**.

3SG	<i>śe</i>	<i>ta-ra</i>	
3PL	<i>tini</i>	<i>tā-ra</i>	

Summary

Previous analyses give the following picture, where [HON] is needed to explain the synchrony:

Diachrony	X	X+ASSOC
2SG	<i>tui</i>	<i>to-ra</i>
2PL	<i>tumi</i>	<i>tom-ra</i>
ANAPH	<i>apni</i>	<i>apna-ra</i>
3SG	<i>śe</i>	<i>ta-ra</i>
3PL	<i>tini</i>	<i>tã-ra</i>

Synchrony	SG	PL
2NH	<i>tui</i>	<i>to-ra</i>
2H	<i>tumi</i>	<i>tom-ra</i>
2HH	<i>apni</i>	<i>apna-ra</i>
3NH	<i>śe</i>	<i>ta-ra</i>
3H	<i>tini</i>	<i>tã-ra</i>

Summary

I argued for a [HON]-less picture, where the synchrony is directly informed by the diachrony.

Synchrony	π	π +ASSOC
2SG	<i>tui</i>	<i>to-ra</i>
2PL	<i>tumi</i>	<i>tom-ra</i>
ANAPH	<i>apni</i>	<i>apna-ra</i>
3SG	<i>še</i>	<i>ta-ra</i>
3PL	<i>tini</i>	<i>tã-ra</i>

Interpretation	SG	PL
2NH	<i>tui</i>	<i>to-ra</i>
2H	<i>tumi</i>	<i>tom-ra</i>
2HH	<i>apni</i>	<i>apna-ra</i>
3NH	<i>še</i>	<i>ta-ra</i>
3H	<i>tini</i>	<i>tã-ra</i>

Conclusion: “No such thing as a referral bonus”

The **diachronic claim is lean**, formalizing the common intuition that avoidance behaviors are the core of polite behavior by drawing on existing ingredients:

- i. *Presuppositional clines*
- ii. *Atomicity*
- iii. *Negative politeness*

Conclusion: “No such thing as a referral bonus”

The **diachronic claim is lean**, formalizing the common intuition that avoidance behaviors are the core of polite behavior by drawing on existing ingredients:

- i. *Presuppositional clines*
- ii. *Atomicity*
- iii. *Negative politeness*

The **synchronic claim is lean**, playing off the diachrony:

- iv. *Repluralization*
- v. *Ranking of pragmatic maxims*, which are needed to explain honorific inferences in any language.

Conclusion: “No such thing as a referral bonus”

The **diachronic claim is lean**, formalizing the common intuition that avoidance behaviors are the core of polite behavior by drawing on existing ingredients:

- i. *Presuppositional clines*
- ii. *Atomicity*
- iii. *Negative politeness*

The **synchronic claim is lean**, playing off the diachrony:

- iv. *Repluralization*
- v. *Ranking of pragmatic maxims*, which are needed to explain honorific inferences in any language.

E. Indo-Aryan is consistent with a [HON]-less analysis, only:

- *Multiple recruitments* occurred, so that a tiered system resulted.
- *Repluralization* occurred, which created some twice-non-atomic forms.

thanks for
listening!

Multiple recruitments and predictions about repluralization

Claim: tiered repluralization only arises where >1 recruitments create distinct honorific tiers, *i.e.* within E. Indo-Aryan:

Otherwise: tiered repluralization doesn't arise. Basque:

Counterexample: Hindi (Yash Sinha's work).

Puzzle: How does the Basque repluralization arise?

3rd and 4th as presupposition-less

3rd person ($\{o\}$) can refer to 1st/2nd person: “imposters”

(Harbour 2016, Sauerland 2008, Podobryaev 2017)

- (23) a. (at a conference) **The authors** / **We** will now announce the prize.
b. (to younger brother) **Sis** is coming to get you.
- (24) a. (to boyfriend) I give this rose to **my one and only** / **you**.
b. (to relative) I won't offend **Grandpappa** / **you** again.

Impersonals ($\{o'\}$) can refer to any person, being the most presuppositionless:

- (25) a. **One** should not walk on the grass.
b. Über das gelb kann **man** sicher streiten.
about the yellow can one certainly argue
'One can certainly argue about the yellow.'
c. Marie et toi et moi, **on** est gentils.
Marie and you and me IMP COP.3SG nice.MASC-PL
'Marie and you and I, we are nice.'

Honorific non-referrers: impersonals

Ainu uses the impersonal pronoun *an* (26) as an honorific pronoun (27).

(26) **An** omap pon menoko ne ruwe ne.
INDEF love be.young woman COP PART
'She is a young woman whom people like.'

(27) **An** nu no.oka, ...
INDEF ask IMPF
'As you (HON) are asking, ...'
Lit.: 'As someone is asking, ...'

(Refsing 1986: 219-22)

Use of impersonals for honorification is also found in:
